USD AND POINT LOMA HIGH BECOME PARTNERS IN SCIENCE

Dr. Mitchell R. Malachowski, University of San Diego professor of chemistry and assistant dean of the College of Arts & Sciences, has received a \$12,000 summer research grant from Research Corporation.

The grant is for a two-year summer research project in which Malachowski will be assisted by a high school science teacher. This is part of a "Partners in Science" program which provides an opportunity for high school teachers to participate in college and university research.

Josephine Carden of Point Loma High School was chosen to take part in the project.

In addition to helping Malachowski with his research, which involves the synthesis and catalytic properties of a series of Copper (II) complexes, Carden will benefit by having the more sophisticated lab at USD at her disposal throughout the school year. When she goes back to her school in the fall, will have more materials to work with.

As a Partner in Science, Prof. Malachowski will, in a sense, "adopt" the school's science program. He will visit Point Loma High School on a regular basis to help them expand their science program and to lecture. He will also send USD students to make

-more-

presentations, show practice applications of science and to do
"magic" shows, using chemistry. The goal is to foster a long-term
collaboration between USD and Point Loma High.

This grant was donated by the Bristol-Myers Squibb Company
through funds contributed to Research Corporation, a foundation
for the advancement of science.
